## POWER AMPLIFIERS

### TFM-6cb

In setting out to design the A-220 Carver's engineering team drew on lessons learned in the design and building of the acclaimed Lightstar Reference amplifier, a development hailed recently in "Fi" magazine as "evidence that Carver Corporation has made a strong commitment to first-rate build quality as well as to engineering innovation."

The A-220 uses Carver's newest power amplification technology "Magnified Current". This technology enables the A-220 to provide either twice the continuous voltage or twice the continuous current needed by the loudspeaker load at any given time. With more than enough current and voltage-peak or continuous- the Lightstar-inspired A-220 is the ultimate consumer amplifier on the market today.

### FEATURES AND SPECIFICATIONS

- Two channel stereo or bridged mono mode
- Discrete circuitry throughout
- Left/Right level controls
- A/B speaker select
- Additional outputs for multiple amp connections
- Frequency Repsonse: 20-20kHz +0,-0.2dB
- Power Output: FTC 20hz-20khz
- 8ohm rated 65 watts per channel
- 4ohm continuous >100 watts per channel
- 8ohm bridged mono >200 watts
- THD: less than 0.08% 8ohms both channels driven
- Gain: 29.0 dB
- Input Impedance 30 kohms
